Objective

Computer Science student with strong problem-solving skills in Data Structures and Algorithms, along with experience in full-stack development and machine learning. Focused on building scalable backend systems and ML-driven applications. Seeking a software engineering internship to apply these skills in real-world environments.

Education

B.E. in Computer Science

2023 – 2027

Cambridge Institute of Technology, Bangalore

CGPA: 8.4/10

Skills

Languages: Python (advanced), C++ (DSA focused)

Frameworks: React.js, Node.js, Flask

Databases: MySQL, MongoDB

Core Concepts: Data Structures & Algorithms (200+ problems), DBMS, Machine Learning

Projects

Smart PRISM Worklet Management System

(Python, Flask, React, APIs)

- Built a full-stack worklet management system using Flask and React, reducing manual coordination overhead between mentors and students.
- Implemented secure user authentication using OAuth.

Fire Detection and Automatic Water Suppression System (In Progress)

(Python, Scikit-learn, OpenCV)

- Developed a computer vision model for fire and smoke detection using OpenCV and Scikit-learn.
- Applied temporal validation techniques to reduce false positives in real-time detection.

Experience

- Contributed to Smart PRISM Worklet Management System as part of Samsung PRISM virtual internship
- Developing an agentic AI system for analyzing GitHub repositories (ongoing).

Achievements

- Solved 200+ problems on LeetCode.
- Completed NPTEL certification: *Getting Started with Competitive Programming*, strengthening problem-solving skills in greedy, recursion, and dynamic programming.

Positions of Responsibility

- Coordinator, Coding Club – Organized coding contests and technical workshops.
